

Double Oven Mitt

Adapted from various inspirations on Pinterest and a memory of Something similar in my Grandmother's kitchen – definitely not inclusive of thermal fleece. I would love to know what was used to provide the heat protection, possibly blanketing or toweling.

Requirements and Construction

20cm Fabric Dark

20cm Fabric Light

20cm Poly-Thermal Fleece

20cm or assorted wadding pieces (20cm x 60cm and 2 20cm x 17cm) wool, cotton or blends

2.2m 1" single fold bias binding or make your own.

From each of the 20cm fabric cut 1, 8" x 24" rectangle and cut 2, 8" x 6½" rectangles

From the thermal fleece cut 8" x 24" rectangle

From wadding cut 1, 8" x 24" rectangle and 2, 8" x 6½" rectangles.

Note Measurements can be adjusted for personal preference and for these notes 20cm is assumed to equal 8 inches.

On the top 8" x 6½" rectangles, using a trusty tea cup gently draw a curve on each corner.

Arrange the four layers Backing, Thermal fleece (silver side down), wadding, top fabric.

Arrange pocket pieces, reversing the order, top fabric on the bottom, wadding, backing fabric on top.

Pin and quilt the 3 units. Best done using a walking foot. Parallel lines, hatching or gentle wavy curves all work well.

Finish the straight 8" edge of the pocket pieces with bias binding.

Check front and back of the Thermal unit and trim if necessary. Working with so many layers can often warp the quilted piece. If you do trim, the pockets may also require adjusting.

Arrange a pocket unit on each end of the large rectangle, pin.

Baste the pockets in place, stitching approx. 3/8" (1cm) in from the outer edge, and inside the curved markings. Stitch length maximum. **Note** Using a contrasting coloured thread will make unpicking much easier.

Trim the ends of your oven mitt back to the previously marked curves.

On the back of the mitt attach bias binding by opening the fold and stitching in the crease. Fold bias to the front of mitt and stitch in place.

Remove basting stitches.

Happy cooking,

Margaret

Note

Sizes can easily be adapted to for a mitt for moving large baking dishes consider increasing the length by 5" to 6"

For a man size barbeque mitt lengthen the hand pockets.
